Sample Question 1: Multiple Choice (Paper 1)

Question: Which of the following best describes the motion of an object moving at constant speed in a circle?

- a) Uniform linear motion
- b) Accelerated motion
- c) Constant velocity
- d) Decelerated motion

Answer: b) Accelerated motion

Explanation: Although the speed is constant, the direction changes continuously, indicating acceleration towards the center of the circle (centripetal acceleration).

Sample Question 2: Structured Question on Forces

A block of mass 2 kg is placed on a frictionless incline at an angle of 30° . Calculate the component of gravitational force acting down the incline.

Solution:

- Gravitational force (weight): $(W = mg = 2 \times 9.8 = 19.6, \text{ N})$
- Component along incline: $(F = W \sin \theta = 19.6 \times \sin 30^\circ = 19.6 \times 0.5 = 9.8, \text{ N})$

Answer: 9.8 N acting down the incline.

Sample Question 3: Wave Phenomena

Question: Describe what happens when a wave passes from a less dense medium to a more dense medium at an angle.

Answer: When a wave passes from a less dense to a more dense medium, it bends towards the normal, and part of the wave may be reflected. The change in speed causes refraction, which results in bending of the wave path.
